

AMENDMENTS TO THE SPECIFICATION

Kindly delete the Disclosure of the Invention section from page 4, line 11 through page 7, line 23, and substitute the following new section:

Summary of the Invention

A first embodiment of the invention is useful in an electronic device having a device housing, a track for engagingly receiving a radio card, a first interface and a first antenna. In such an environment, the radio card comprises a card housing and a second interface, disposed on the card housing, that, upon receipt of the radio card by the electronic device, engagingly couples with the first interface. A radio circuit is disposed within the card housing and is communicatively coupled to the second interface. A third interface is electrically and physically independent of the second interface and is disposed on the card housing. The third interface is communicatively coupled to the radio circuit, and the third interface is engagingly coupled with the first antenna upon receipt of the radio card by the electronic device via the track.

A second embodiment of the invention is useful in an electronic device that has a device housing, a first interface and a first antenna. In such an environment, the electronic device engagingly receives a radio card comprising a card housing including a second interface, disposed on the card housing, that, upon receipt of the radio card by the electronic device, engagingly couples with the first interface. A radio circuit is disposed within the card housing, and is communicatively coupled to the second interface. A third interface is electrically and physically independent of the second interface, and is disposed on the card housing. The third interface is communicatively coupled to the radio circuit, and the third interface is engagingly coupling with the first antenna upon receipt of the radio card by the electronic device.

AMENDMENTS TO THE CLAIMS

None.
